Abdel-Rahman Mohamed Saied

Software Team Lead | Senior Software Engineer, Backend

Riyadh, Saudi Arabia • abdelrahmansaied080@gmail.com • asaied.dev • linkedin.com/in/abdel-rahman-saied • github.com/Abdel-RahmanSaied

PROFESSIONAL SUMMARY

Software Team Lead and Senior Software Engineer with 6+ years building SaaS and distributed backend systems. Built and directly manage a team of up to 13 engineers, with responsibility for hiring, performance reviews and delivery. Partner with the CEO on engineering priorities while remaining hands-on in architecture, code and production. Choose languages and tools to suit the problem.

TECHNICAL SKILLS

Backend: Python, Go, Django, Django REST Framework, FastAPI, Celery, REST API design, Authentication & RBAC
Data & messaging: PostgreSQL, PostGIS, Redis, Elasticsearch, AWS SQS
Cloud & delivery: AWS (EC2, RDS, S3, ALB), Terraform, Docker, Kong API Gateway, GitHub Actions, Elastic APM, Prometheus
Engineering practice: Service boundaries, Async pipelines, Multi-tenancy, Third-party & payment integrations, Code review, Mentoring

PROFESSIONAL EXPERIENCE

Software Team Lead | Senior Software Engineer, Backend — ASAS IT — Aug 2024 – Present · Riyadh, Saudi Arabia

Directly manage up to 13 engineers across backend, frontend, mobile, AI and QA. Own hiring, performance reviews, promotions, planning and production delivery for Twiscope and MURI, alongside architecture and code review.

- Twiscope: built the original backend and led workflow and caching improvements. Internal production logs showed a comparable ~100,000-post collection and analysis job falling from over five hours to around three minutes on unchanged resources.
- Sanad AI: led architecture and retrieval design with AI engineers; personally built SQS report ingestion, service integration, deployment and tracing.
- Delivery: designed and operated GitHub Actions with self-hosted runners. Twiscope production deployment requires passing SAST/SCA security gates for the exact release commit.
- MURI: led the team building a student-transportation platform (Django/DRF, PostGIS, Celery, HyperPay); personally set up the backend, JWT/OTP auth and deployment pipeline, and built its PostGIS geography models and geofenced trip validation.

Senior Software Engineer, Backend — ASAS IT — Sep 2023 – Aug 2024 · Riyadh, Saudi Arabia

Started Twiscope's backend as its sole developer: Django/DRF services and Celery pipelines for X API v2 keyword and account analysis, Instagram, TikTok and Google reports, subscriptions and quotas, and containerised deployment on AWS.

Technical Lead, Backend — Check-In (Hayyak) (freelance) — Apr 2024 – Jan 2026 · Riyadh, Saudi Arabia

Backend lead and primary contributor for a hotel guest self check-in platform: multi-hotel data model, Oracle OPERA Cloud (OHIP) integration with check-out folio settlement, Tap Payments and HyperPay behind one gateway layer, support chat, and a FastAPI adapter for Saudi Shomoos reporting.

Software Engineer — Prime Consulting Office (PCO) — Nov 2022 – Oct 2023

Built backend solutions for consulting clients, translating their requirements into REST API contracts and technical specifications.

Backend Software Engineer — ClouDev Solutions — Sep 2022 – Jul 2023 · Egypt

Developed REST APIs, backend integrations, and production service improvements.

Desktop Software Engineer — Co-Source — Aug 2020 – May 2022 · Egypt

Developed Python desktop applications (PyQt/PySide) and automated reporting workflows.

SELECTED PROJECTS

Fendix — Independent project I created and maintain — application security decision platform: confidence-scored SAST/DAST/SCA findings and coverage-aware release decisions; open-source Go CLI (MIT) with signed releases, plus a hosted platform (fendix.dev).

EDUCATION

B.Sc. Computer Science — Higher Technological Institute (HTI)
Egypt · 2022 · Graduation project graded A+
